Locked Files Wizard is an easy to use Windows tool that can move or delete locked files. There are plenty of apps out there designed to help you deal with locked items, but Locked Files Wizard adopts a new approach, one that's aimed at all user categories. It relies on a wizard that guides you throughout the entire process, providing step-by-step assistance until you finally manage to delete, move or rename the selected file. The application is fully portable and comes with separate builds for 32- and 64-bit versions of Windows. You can simply copy the executable file on a removable drive and use it on the go, regardless if you're trying to delete Trojan horses or simply to get rid of locked files. Context menu integration is also available, but this requires installation. You can thus select a file for removal straight from Windows Explorer as you browse the disk content. Locked Files Wizard doesn't require anything else than basic computer skills and can be launched successfully on all Windows versions released so far. It doesn't comprise a help manual, but the step-by-step instructions you get throughout the wizard should be enough for every rookie out there. All in all, Locked Files Wizard is indeed a helpful tool that can deal with locked items, be they files or folders. It has a well thought out approach and can be installed by any user category unless they do not wish to remove system files that could affect the overall stability of the computer.
