The effect of platinum-based agents in the treatment of breast cancer was investigated in 21 cases of metastatic breast cancer. Weekly administration of cisplatin was effective in 5 cases with bone or lung metastasis. Adriamycin alone showed good effects in 2 of 11 cases with liver metastasis. Vincristine alone showed good effects in 1 of 2 cases with lung metastasis. The effects of the combination therapy with vincristine plus platinum-based agents were evaluated. In 9 of 17 cases, either cisplatin alone or cisplatin in combination with other platinum-based agents showed good effects. While 3 of 5 cases with lung metastasis showed no effect, the remaining 2 cases showed good effects. However, the results of the combination therapy were not so satisfactory. In any case of combination therapy, the best effects were obtained when both drugs were administered simultaneously. The results indicate that the combination therapy with cisplatin plus other platinum-based agents may be an effective treatment for breast cancer.Is this your first time watching this video? Welcome to School for Scoundrels. I'm Roo, a second year Law student at Oxford University. When I was in my first year, my best friend and I were fascinated by the barristers in the University. We'd visit the library and borrow books, read articles about the bar and always listened to the radio, learning a lot of information. But it was only until I started watching the Bar Progression, the training programme by The Law Society, that I had the chance to understand what barris a1d647c40b
